

## Data Science Internship - Job Description

Company seeks an intern or a junior data scientist with basic econometric or data science knowledge and experience with R coding. The intern will gain exciting real-world data science experience at a very young start up.

The company has many years of experience in real estate valuation, cooperates with banking institutions, government agencies and private clients. It develops a unique tool for real estate valuation, price development control or the creation of indicative prices using modern technologies.

### Responsibilities

The intern will in a cooperation with the rest of the team

- improve and expand the already available model(s) for valuation of real estate
- prepare parts of documentation for the client to review and accept
- research academic papers to get methodology suggestions for model improvements
- contribute to data quality improvements

### Requirements

Even though this is an internship position, the applicant has to have experience with

- R programming
- basic econometric or data science methodologies

It is nice to have experience with

- spatiotemporal modeling
- real estate data
- data science or software development from previous job
- GIT

### Benefits

- Work in a small company where every member counts
- Very quick learning curve
- Practical experience with software and data science project development
- Work from home
- Close cooperation with senior data scientists, sales and developers, including mentoring
- Flexible schedule
